### **Information about the speaker**

Per has worked for over 35 years for the paper industry. After chemical engineering studies in Gothenburg Sweden he joined Eka Chemicals in 1979 and was part of the team that developed Compozil, the first nano-particle based retention aid system. In 1989 he joined Stora Papyrus for a role as technical manager, coated papers. With experience in wet end chemistry and coating he was asked to join English China Clays in 1994. The career in what has now become Imerys started as sales director for Scandinavia and has moved through various other roles until the formation of the FiberLean team. Per was one of the inventors of the FiberLean<sup>®</sup> process and has a key role in the newly formed FiberLean Technologies Ltd, a 50/50 JV owned by Imerys and Omya.
